

Informfully

An Open-Source Research Platform for Content Recommendation

Lucien Heitz, University of Zurich

Core Components

Mobile App

Mobile app for user studies
(available for Android and iOS)

Content Scraper

Out-of-the-box scraper for online
resources with data augmentation

Administrator Website

Online control panel for project
setup and experiment administration

Recommender System Infrastructure

Recommender framework for
beyond-accuracy objectives

App and Administrator Website

App

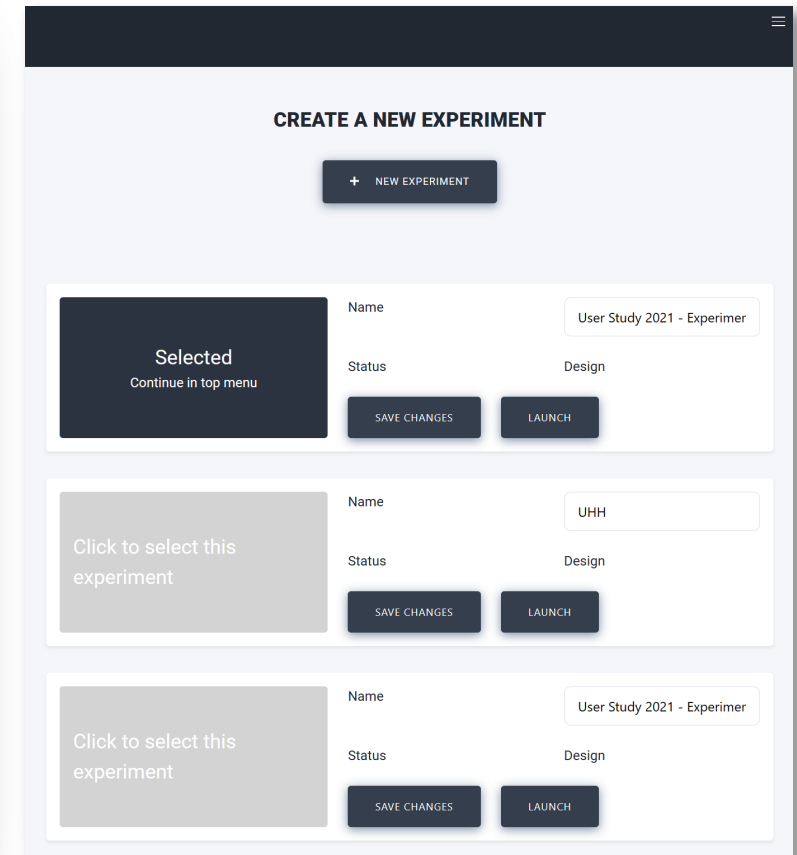

- Android/iOS
- User tracking & in-app surveys
- Multimedia content (text, audio, and video)

Website

- Set up experiments
- Generate user accounts
- Content curation
- Create & edit surveys

Technologies used

- React Native, Meteor, MongoDB

Content Scraper and Recommender Infrastructure

Scraper

- Scraper for online news (text, audio, and video)
- Modularized data augmentations pipeline (clean, text normalization, picture recommendation, style rewriting, sentiment analysis)

Recommender (phases in the spirit of Cornac)

1. Data loading
2. Data splitting
3. Model selection
4. Metric selection
5. Create reusable experiment setup file with control for visualization/presentation

Technologies used

- Python & friends, MongoDB

**Universität
Zürich** ^{UZH}

Department of Informatics – Dynamic and Distributed Information Systems Group

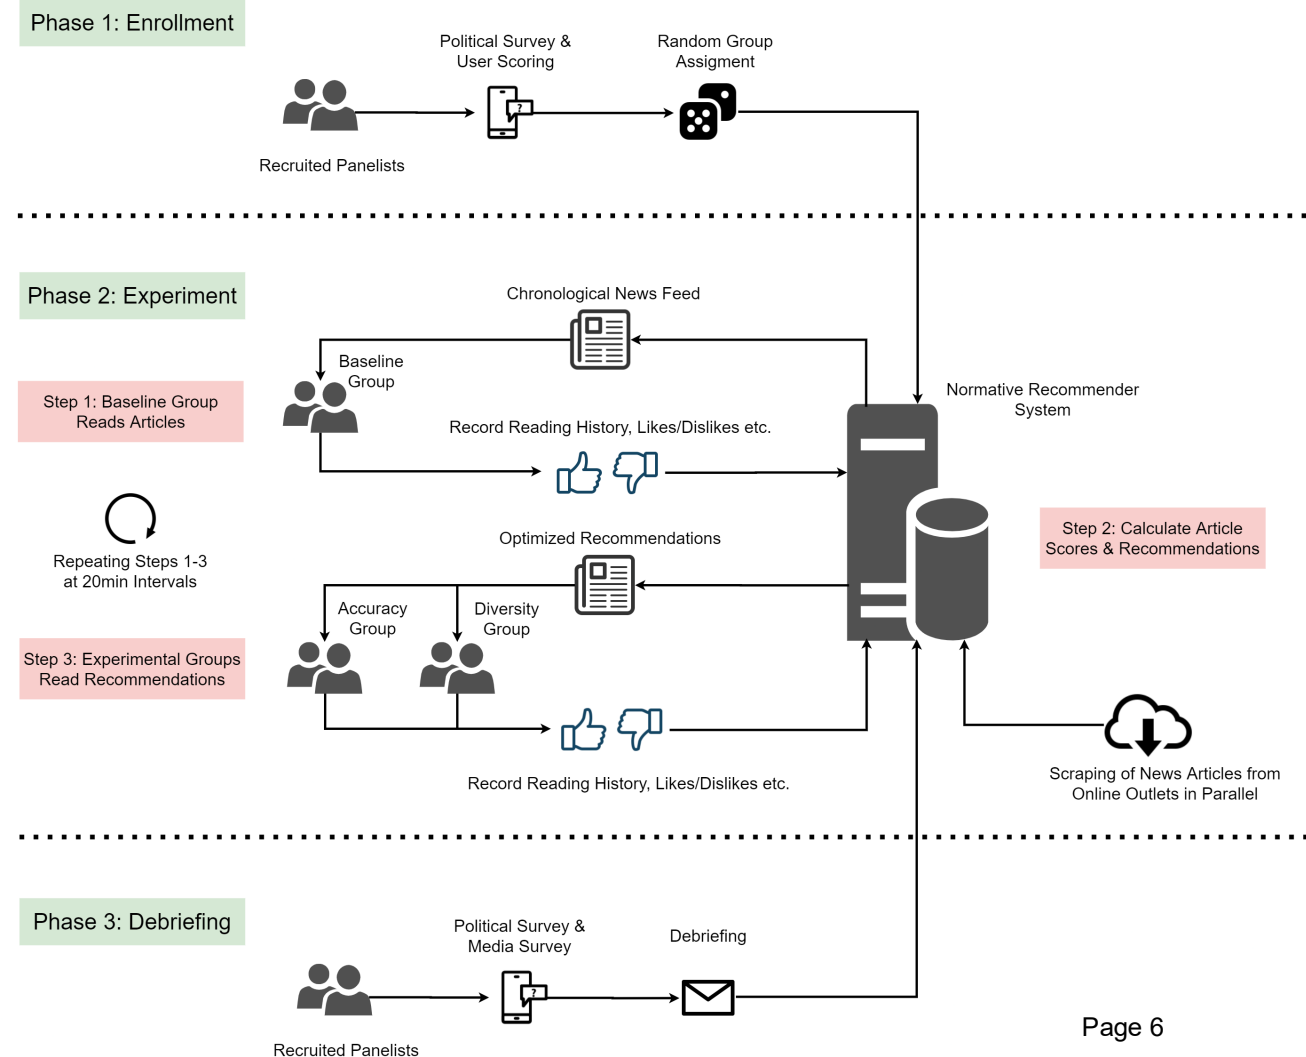

App and Website Demo

Previous Studies

- 3 studies in CH/DE (combined 1,600+ users)
- 1.3M+ news items consumed
- ‘Normative’ recommendation models for
 - participatory diversity
 - deliberative diversity
- Better than “temporal” feed in terms of
 - user engagement
 - user satisfaction
